

SAFE BALLOON PRACTICES

Don't release helium balloons outdoors - tie each helium balloon individually to a weight.

Uninflated or burst balloons can present a choking hazard - please supervise small children at all times.

To remove the risk of injury, always use a balloon pump and NEVER inhale helium.

Balloons made of natural rubber latex may cause a reaction in those with latex allergies. Look out for symptoms and seek help if required.

Remember, when done with a balloon, simply snip the end of the balloon with scissors to deflate before placing in a suitable disposal or balloon recycling bin.
